# The French Socio-Political Data Center (CDSP): Open Data since 2005

Alina DANCIU

Open Science in France – Data Policy can make a difference  
CLOSER online webinar, 19 March 2025

---

# 20 years of open science

One of the French Socio-Political Data Center's (CDSP) main missions is to serve the French and international social sciences and humanities (SSH) communities by **facilitating the reuse of surveys and data, both quantitative and qualitative, in the fields of sociology and political science**, since 2005.

A **support and research unit** (UAR 828) set up in 2005 by Sciences Po and the French National Research Center (CNRS)

A team of 25 developers, data managers, panel managers and survey specialists

---

# OUTLINE

**NATIONAL FRAME** : French Plan for Open Science

**NATIONAL ECOSYSTEM** : Skills and Training College & RechercheDataGouv Portal & network

**FUNDING** : Research on open science practices and stakes (Réso 2024 bid)

# Second French Plan for Open Science

We will encourage  
practices that  
favor research  
data reuse

Path Two

Structuring, sharing  
and opening up  
research data

---

# The Skills and Training College

Skills and training

The work of this College is part of the National Plan for Open Science's fourth commitment which aims to transform practices by developing and enhancing open science skills throughout the careers of students and research professionals.

# Guides published by the college

---

# Research on open science practices and stakes

## **Research on open science practices and stakes**

In order to identify the needs and interest of the scientific communities regarding open science practices and stakes within research practices, the French National Research Agency launched a call for expressions of interest in April 2023, which led to a major mobilisation of communities. The analysis of these proposals has highlighted the diversity of expectations and needs. Therefore, the ANR is launching a specific call for proposals open to all scientific communities, on the practices and stakes of open science.

<b>ETAPSS</b>	Etudier le Travail d'Anonymisation des Publications en Sciences Sociales	GARCIA Guillaume
<b>FAIRwDDI</b>	Implémentation des principes FAIR avec le standard des métadonnées Data Documentation Initiative (DDI)	DANCIU Alina

# FAIRwDDI project

*PI: Alina Danciu*

*Many efforts have been made in recent years to put the FAIR principles into practice. If the first three FAIR criteria are now widely explored, the R, which is supposed to result from them is much less so.*

**French National Research Agency funded**

---

## Why FAIRwDDI?

*Many efforts have been made in recent years to put the FAIR principles into practice. If the first three FAIR criteria are now widely explored, the R, which is supposed to result from them, is much less so.*

---

## Three main objectives

- Empirically validate **formal criteria on the “Reusable” criterion of the FAIR principles** (quali/quantitative survey on the reuse of data)
- Create **online tutorials** on a standard that has proven its impact on reusability aspects, the Data Documentation Initiative (DDI)
- Establish **a protocol for curation of questionnaire survey metadata using AI & a question bank**

---

## WP1: The R of FAIR

**Come up with formal criteria to study aspects linked to the Reusable criterion of the FAIR principles**

27 months work package

FAIR assessment tools, established for example by European initiatives such as GO FAIR, mainly explore metadata issues and very little the data itself

---

# Main questions

REUSABILITY aspects

Data quality and  
provenance

Metadata standards that  
have proven their role  
when it come to data  
reusability like DDI in SSH

---

## Better implementation of FAIR principles

*How can we better implement the FAIR principles when it comes to data reuse?*

*How to account for replicability and reusability and the objective criteria for defining what constitutes a replicable and reusable dataset?*

---

# Research protocol to better understand the French social scientists' data reuse behaviour

## Qualitative survey

- 8 to 10 interviews with the secondary users
- Heterogeneous sample of datasets to be explored

## Main questions

- Reusers' criteria when choosing a specific dataset
- Obstacles and burdens that then lead researchers to drop a specific dataset

## Quantitative survey

- Distribution of questionnaires to the French community of secondary data users via several mailing lists

## Main questions

- Most important elements concerning the data reusability
- Different data citation or non-citation behaviour

---

## WP1 deliverables

- Recommendations to improve the implementation of the R of FAIR
- Research paper
- Data collected in the project will be shared with the community

**In collaboration with**   **Hungary**

---

## WP2: DDI training materials for beginners

**Build user-friendly training materials for complete beginners**

Working plan:

Half-day meeting CDSP/CLOSER in February

One week sprint CDSP/CLOSER mid May

Once slide deck is written and training material edited, translation in French

**SciencesPo**

## WP3: Upscaling metadata using AI

**AI-assisted metadata curation protocol using a SSH thesaurus  
(a lighter version of ELSST)**

36 months work package

**Centre for socio-political data & partners (FSD and INSERM)**

**Deliverable:** an open-source question bank tool

---

## Conclusions

- Written policy that gives an official frame and direction
- A more dynamic and visible open science community
- Funding for open science research (open data)
- Standards like the Data Documentation Initiative that became more visible and important
- French community is more visible internationally

---

# Credits

The FAIRwDDI slides were initially published in the project's online kickoff présentation from 7 February 2014. Alina DANCIU, Jieun JEONG, Lucie MARIE.
